- graphical diagram produced from the parse tree of a given syntax. - This diagram consists of nodes and edges. Each node is a syntax tree of the given syntax. - Each edge is the binding between the two nodes. The semantics of the binding is resolved by the nodes. - Through the generated diagrams, it is possible to understand the hierarchy of the grammar more easily. - Automated process - Graphical Representation - Efficient process - Can use with Java, Groovy, Scala, Kotlin, Python, and other languages 1.27.1 2015-07-10 Release date: 2015-07-10 Many small bugs fixed, code refactor. 1.27.0 2015-06-24 Release date: 2015-06-24 Many small bugs fixed, code refactor. 1.26.1 2015-05-23 Release date: 2015-05-23 In debug mode, the method debug assert failed, namely the methods debugAssert() can no longer be run for the reason that they have thrown an exception. To prevent debug assertion failure, the configuration can be turned off by modifying the file jdbc/debug.properties. 1.26.0 2015-03-21 Release date: 2015-03-21 Many small bugs fixed, graph color change. 1.25.0 2015-02-24 Release date: 2015-02-24 A new feature: Auto pack. When generating the diagram, all individual nodes will be placed into one 2 x 2 grid, and the diagrams will be automatically generated. 1.24.1 2015-02-24 Release date: 2015-02-24 A new feature: Auto pack. When generating the diagram, all individual nodes will be placed into one 2 x 2 grid, and the diagrams will be automatically generated. 1.24.0 2015-02-24 Release date: 2015-02-24 The method doCanvasGradient(String, String, String) is added to the Path or Group. When generating a path, the path will be set to the path with gradients by default. The method doCanvasShader(String, String, List) is added to the Path or Group. When generating

## RRDiagram [Win/Mac]

To generate a notational diagram from a source, e.g. BNF notation, RRDiagram has to be able to parse that input and generate a graphical representation based on that. RRDiagram can parse/process different formats and languages, for example: \* pure XML/HTML files \* Java/JavaScript/Ajax/JQuery/CSS code \* INI/INF/JSON and many others \*... RRDiagram's Java API is very lightweight and readable, so anyone can understand and use it to generate/generate the diagrams easily. How to use: Add the following line to the META-INF/services/com.eaglegenome.rrdiagram.model.command.RrdiagramResourceReader.class file (please refer to the section "Adding a resource file to the package" for more information about this file) : jrrdiagram.rrdiagram.model.command.RrdiagramResourceReader=com.eaglegenome.rrdiagram.tool.RrdiagramDiagramResourceReader How to use: The corresponding diagram is displayed automatically within your browser when you are loading the rrdiagram-lib.js file in your JavaScript/JQuery/Ajax webpage. The structure of rrdiagram-lib.js file is easy to understand: Rrdiagram is a lightweight Java library designed to help you generate syntax diagrams from BNF notations, models or code.
