PSD-X is a native file format designed to store 3D shapes, animations, textures, and other digital assets within a single, easily scaleable file. Adobe project staff at their Computational Design Lab in San Francisco worked closely with industry partners Autodesk, Solid Angle, Luxology, Lim3D and others to create a cross-compatible standard that facilitates future-proofing of digital assets developed in Photoshop. From now on, Photoshop will intuitively and seamlessly run in a completely GPU-accelerated environment, without losing performance and quality. This is an important milestone for the future of the industry which may soon shift the industry as we know it to run on GPU-accelerated formats. "We're seeing the explosion of GPU-accelerated tools like Substance Painter and after Effects, and Photoshop 8 moves us closer to a more common future." Brown said.
